

Maintenance Practices				
#	Environmental Compatibility Indicator	Yes	Partial	No
1	Is contour mowing used to conserve fuel and increase playability and aesthetics?			
2	Are there designated non-maintained or minimally maintained buffers around core wildlife habitats?			
3	Are green, tee, and fairway mowing heights maintained at reasonable levels without continually stressing turf or maximizing chemical inputs?			
4	Are there regular procedures in place to continually improve soil health such as organic amendments, aeration, and drainage?			
5	Is there a map of the course's "hot spots" requiring special care or regular attention?			
6	Is all maintenance equipment maintained and cleaned in a manner that eliminates the potential for spreading of contamination?			
7	Has there been a complete examination for potential negative environmental impacts of all aspects of the operation including snack bar/grill, clubhouse, pro shop, and maintenance complex?			
8	Are green, tee, and fairway mowing heights maintained at reasonable levels without excessively stressing turf?			
9	Have all playing surfaces been inventoried and mapped for soil types including soil structure, nutrient levels, organic content, compaction, and water infiltration?			
10	Are soil tests and plant tissue analysis used to determine nutritional requirements?
